Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24,38-45 and 49-53, drawn to a blind, classified in class 160, subclass 168.1R.
- II. Claims 25-37 and 46-48, drawn to a spring actuating system, classified in class 242.
- III. Claims 54-72, drawn to a method of customizing blinds, classified in class 29, subclass 24.5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the actuating system as claimed has details which are not required in the combination. The subcombination has separate utility such as to actuate cords in any device besides a blind.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, a different process could be used, such as ascertaining the performance characteristics of the

blind by analyzing the weight, size, etc., in stead of operating the drive actuator (claim 54).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: blind systems- Fig. 1; Fig. 2; Fig. 3; Fig. 4; Fig. 5; Fig. 7; Fig. 23; Fig. 27. Take-up systems- Fig. 9; Fig. 12a,b. Brake system- Fig. 15; Fig. 16; Fig. 19; Fig. 22. Counterbalance system- Fig. 25; Fig. 26. Bottom rail weight- Fig. 29; Fig. 30. One each of each of these categories of species must be chosen.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
